Project:

CO2 emissions in tons / year

The lighting results are based on specifications from DIN EN 12464-1 and serve as orientation for evaluating energy-efficient lighting installations for indoor use. The results do not replace detailed planning. These can be implemented by forwarding the data to standard light calculation software products such as Dialux and Relux. A warranty / liability for this free calculation is not assumed by Siteco. In this regard we refer to the services offered by lighting design and engineering offices.

Values are based on precise calculations with calibrated lamps, luminaires and their configurations. In practice, gradual deviations may occur. Liability claims for luminaire data are excluded. The manufacturer assumes no liability for subsequent damage to users or third parties.
